Reducing Waste

- Importance of recycling
  - Create a clean, mess-free compost bin for indoor use
  - Create an engaging product to teach kids to recycle
  - Create a fun to use recycling station for outdoor use; e.g. a park
- Design a repair/upcycling kit to give clothes a second life
- Design a "gravity powered" nightlight to reduce the need for harmful batteries.
- Design a fridge storage solution with a built in device to tell you how old food is.
- Products to turn plastic waste into 3D printing filament
- Helps you avoid food going back.
- Design a durable reusable lunch pack system with modular components
- Packaging and product waste
  - Create a reusable or light on materials alternative packaging solution
- Lightweight, reusable picnic kit
- Create a decoration solution that can be adjusted and re-used for every season.
- Reusable food wrap
- Refillable pen
- Create an "anti-leak pen"
- Design a toy that evolves with the user to reduce single-use
- Reusable water bottle
- Design a visual aid / poster designed to educate people about recycling
- Create more clean, attractive bins
- Design a modular pencil case designed to increase organization and stop disappearing equipment.
